Troy Bayne  
*Eastman Chemical Company*

Over the last 3 years Troy has emerged as a leader, architect, and developer of leading edge software for Eastman Chemical Company. This software, which leverages the web interface, has created value quickly for end users by providing simple interfaces to information from a variety of sources. Those systems include SQL Server databases, manufacturing systems data, and of course, R/3 information. By using the infrastructure provided by ITS, the Eastman project team has successfully implemented several applications which not only web enable transactions, but revamp and improve the entire business process surrounding those transactions. These applications have been delivered on desktop browsers as well as on handheld wireless devices. Over the next few months, our team will see significant value returns on the investment given to these projects.
